## Rainwater harvesting and attenuation tank – reuse and storage combined

Free site specific technical support available!

Due to increasing demands on our natural water resources here in the UK, Kingspan Klargester have designed a system which helps both domestic and commercial applications achieve a water neutral status. Our range of storage capacities is designed to combat the increasing problem of climate change.

The Klargester AquaCombi helps households reduce their Per Capita Consumption (PCC) which is a measure of how much water household customers use at home every day. It is usually measured in litres per person per day (l/p/d).

This system can reuse water from the roof back into toilet flushing and washing machines, as well as reducing downstream attenuation needs.

As part of our Planet Passionate programme, Kingspan are dedicated to delivering innovative surface water management technologies, developed on the back of 65 years' experience.

## **Klargester** AquaCombi Rainwater harvesting and attenuation tank – reuse and storage combined

### Why choose an AquaCombi solution?

- Simple, cost effective solution for both reuse and storage
- Helps households reduce PCC and saves money
- Free technical and sizing support from our expert team
- Ideal for both domestic and commercial applications
- Reduces downstream attenuation needs
- Intelligent flow control device allows the water to be discharged at a specified flow rate
- Smart design negates reliance on complex weather forecasting software
- Full range of capacities available
- 3 year warranty (terms and conditions apply)
- Professional service and maintenance packages available
